Research Assistant (2015)

Researched and applied machine learning principles for identifying 3D building assets within open standard Building Information Models.

Ph.D. Student (2018 - Present)

Currently researching the use of passive Internet of Things sensors, computer science and wearable devices to measure a spectrum of environmental parameters and health pathologies.

CIS Student (2014)

Graham Coulby
Senior Technician
Faculty of Engineering & Environment

Ellison D104

graham.coulby@northumbria.ac.uk

Computer Scientist / BIM Consultant
(2016 – 2018)

Researched and applied machine learning principles for identifying 3D building assets within open standard Building Information Models.

Senior Technician (Present)

Currently undertaking research and development of a digital sensor platform to transform CIS sensor data into a live research asset. Also providing ongoing technical & research support to CIS.

Paul Vickers – Professor of Computer Science and Sonification

In sonification and audification, signals, data sets, or signals to create an auditory display of the data. Audi into digital audio samples and the length of the result

Like audification, auditory graphs maintain the tempo
